

Amplificatore front-end SiPM

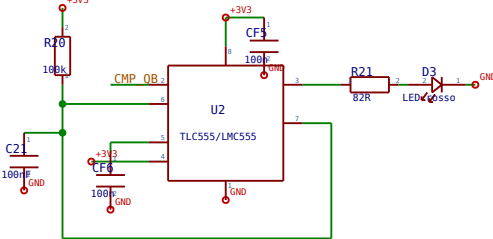

Comparatore di soglia

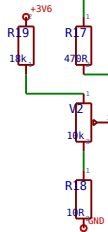

Driver uscita

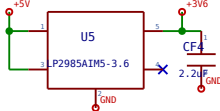

Monostabile LED (~11ms)

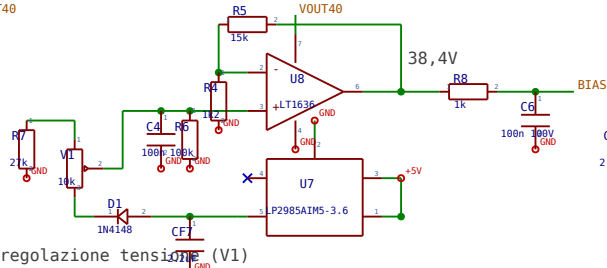

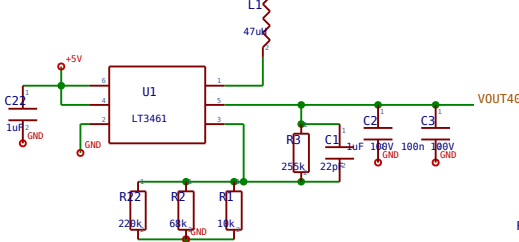

Soglia (V2)

Rif. soglia 3,6V

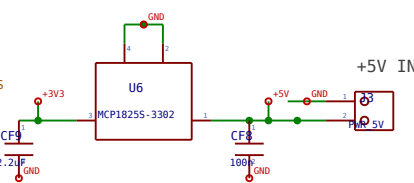

Boost 40,2V (bias SiPM)

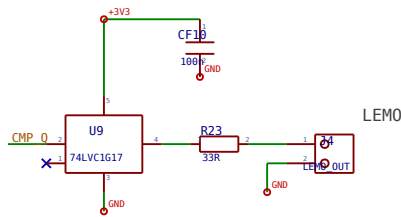

regolazione tensione (V1)

Rif. 3,6V (B)

Alimentazione 5V -> 3,3V

Buffer uscita 3,3V -> Raspberry Pi (74LVC1G17)

Riv. Cosmici 2024 - 1 canale

Amplif, alim, soglie + uscita 3,3 V per Raspberry Pi (74LVC1G17)

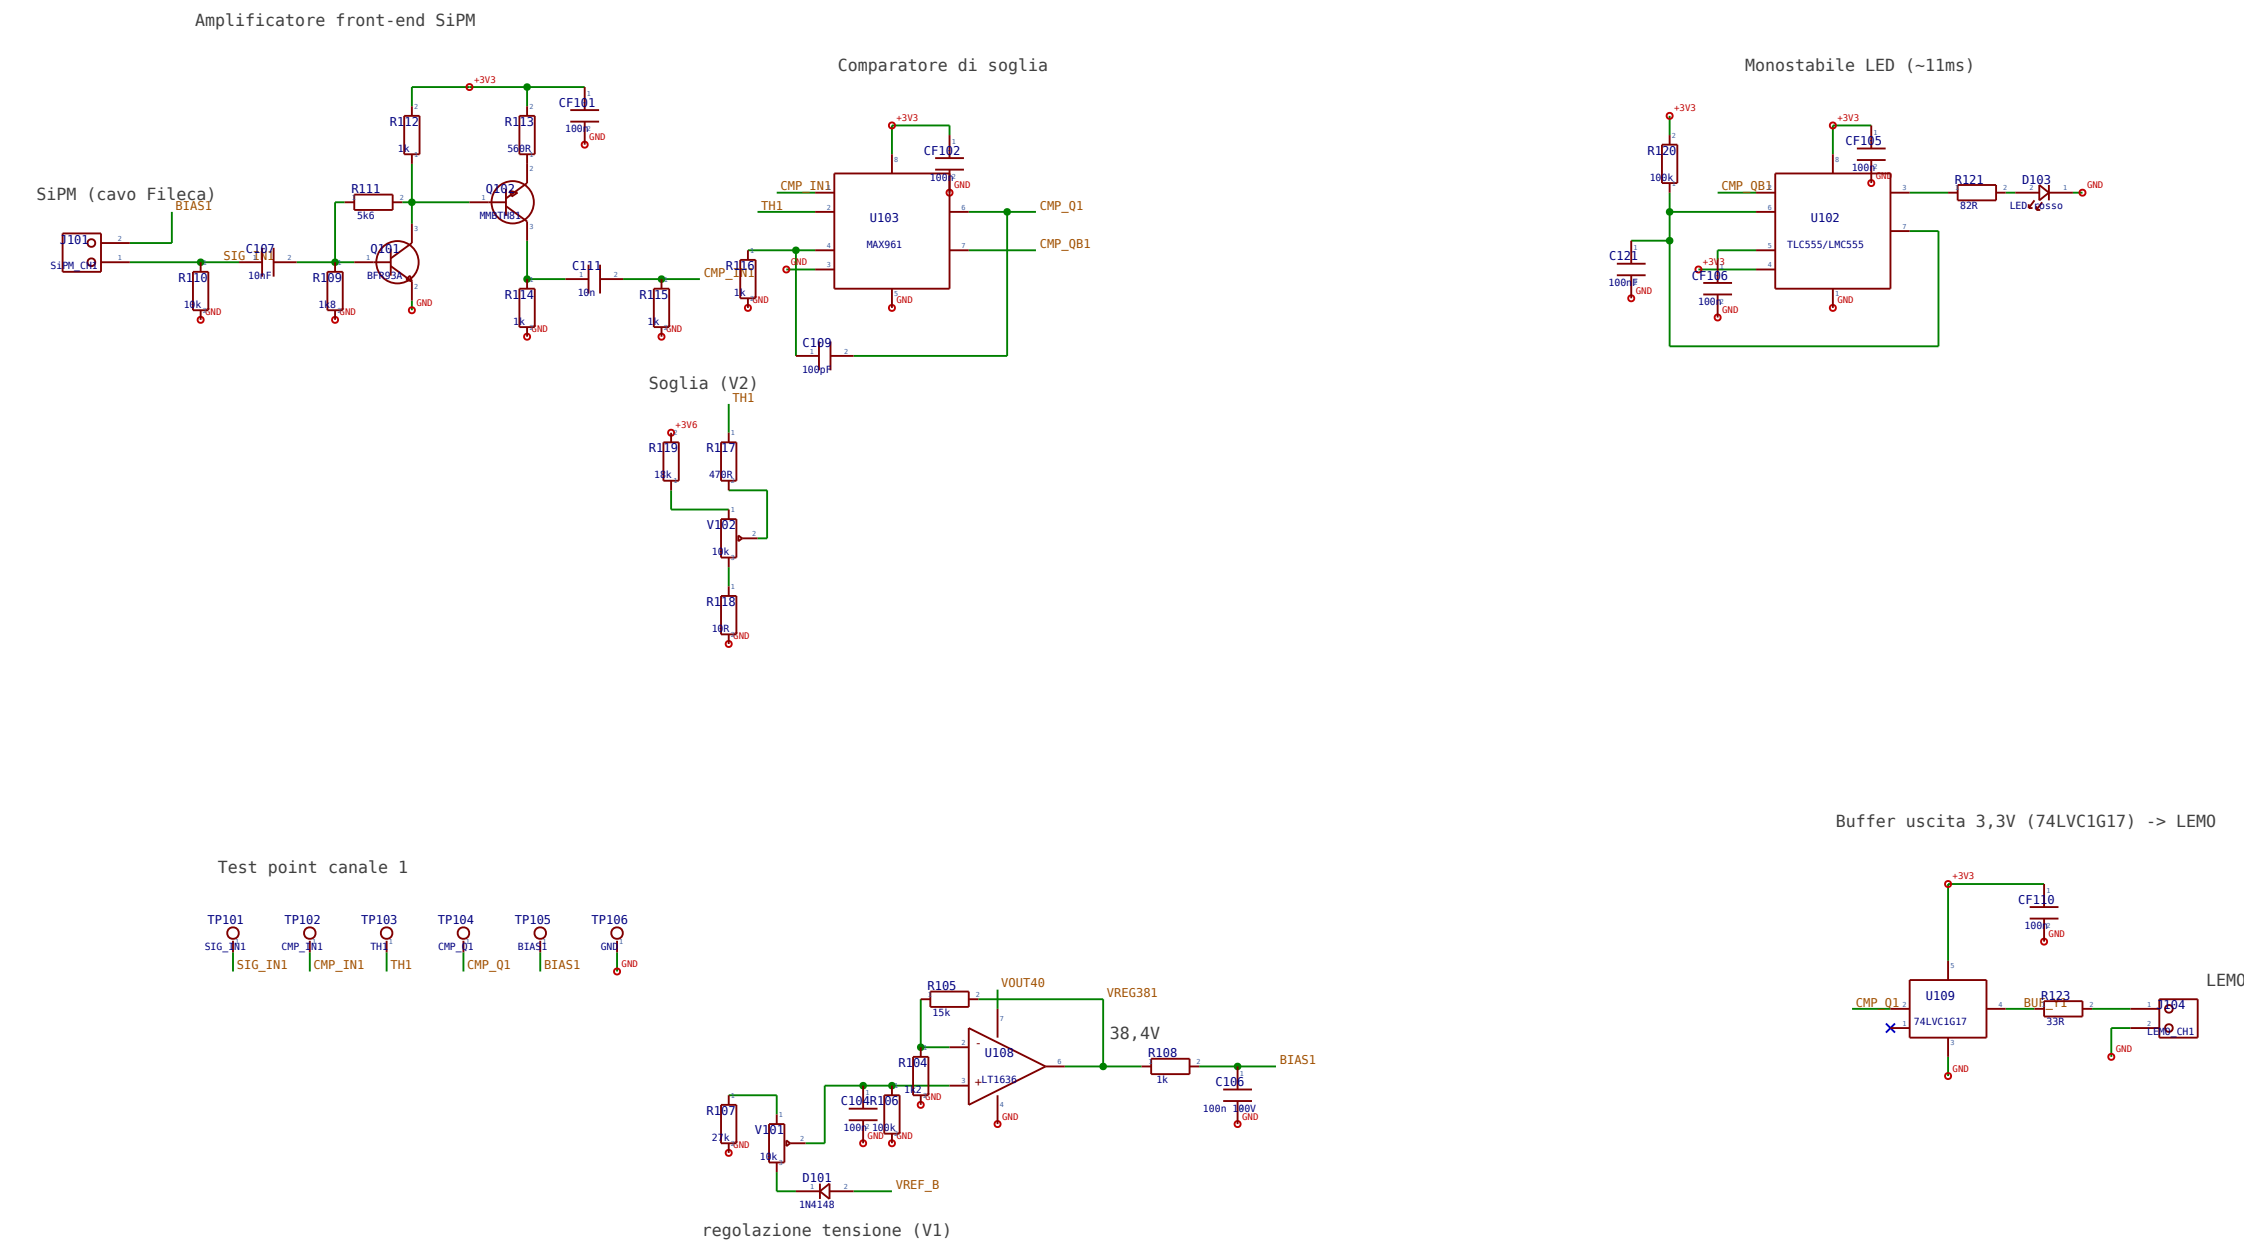

Progetto originale: INFN sez. Torino, S. Gallian (rev. A, 2024)
Licenza CERN-OHL-W-2.0 - github.com/bagnasconicolo/glacier-elettronica

Rev. A2 Data 2026-10-10

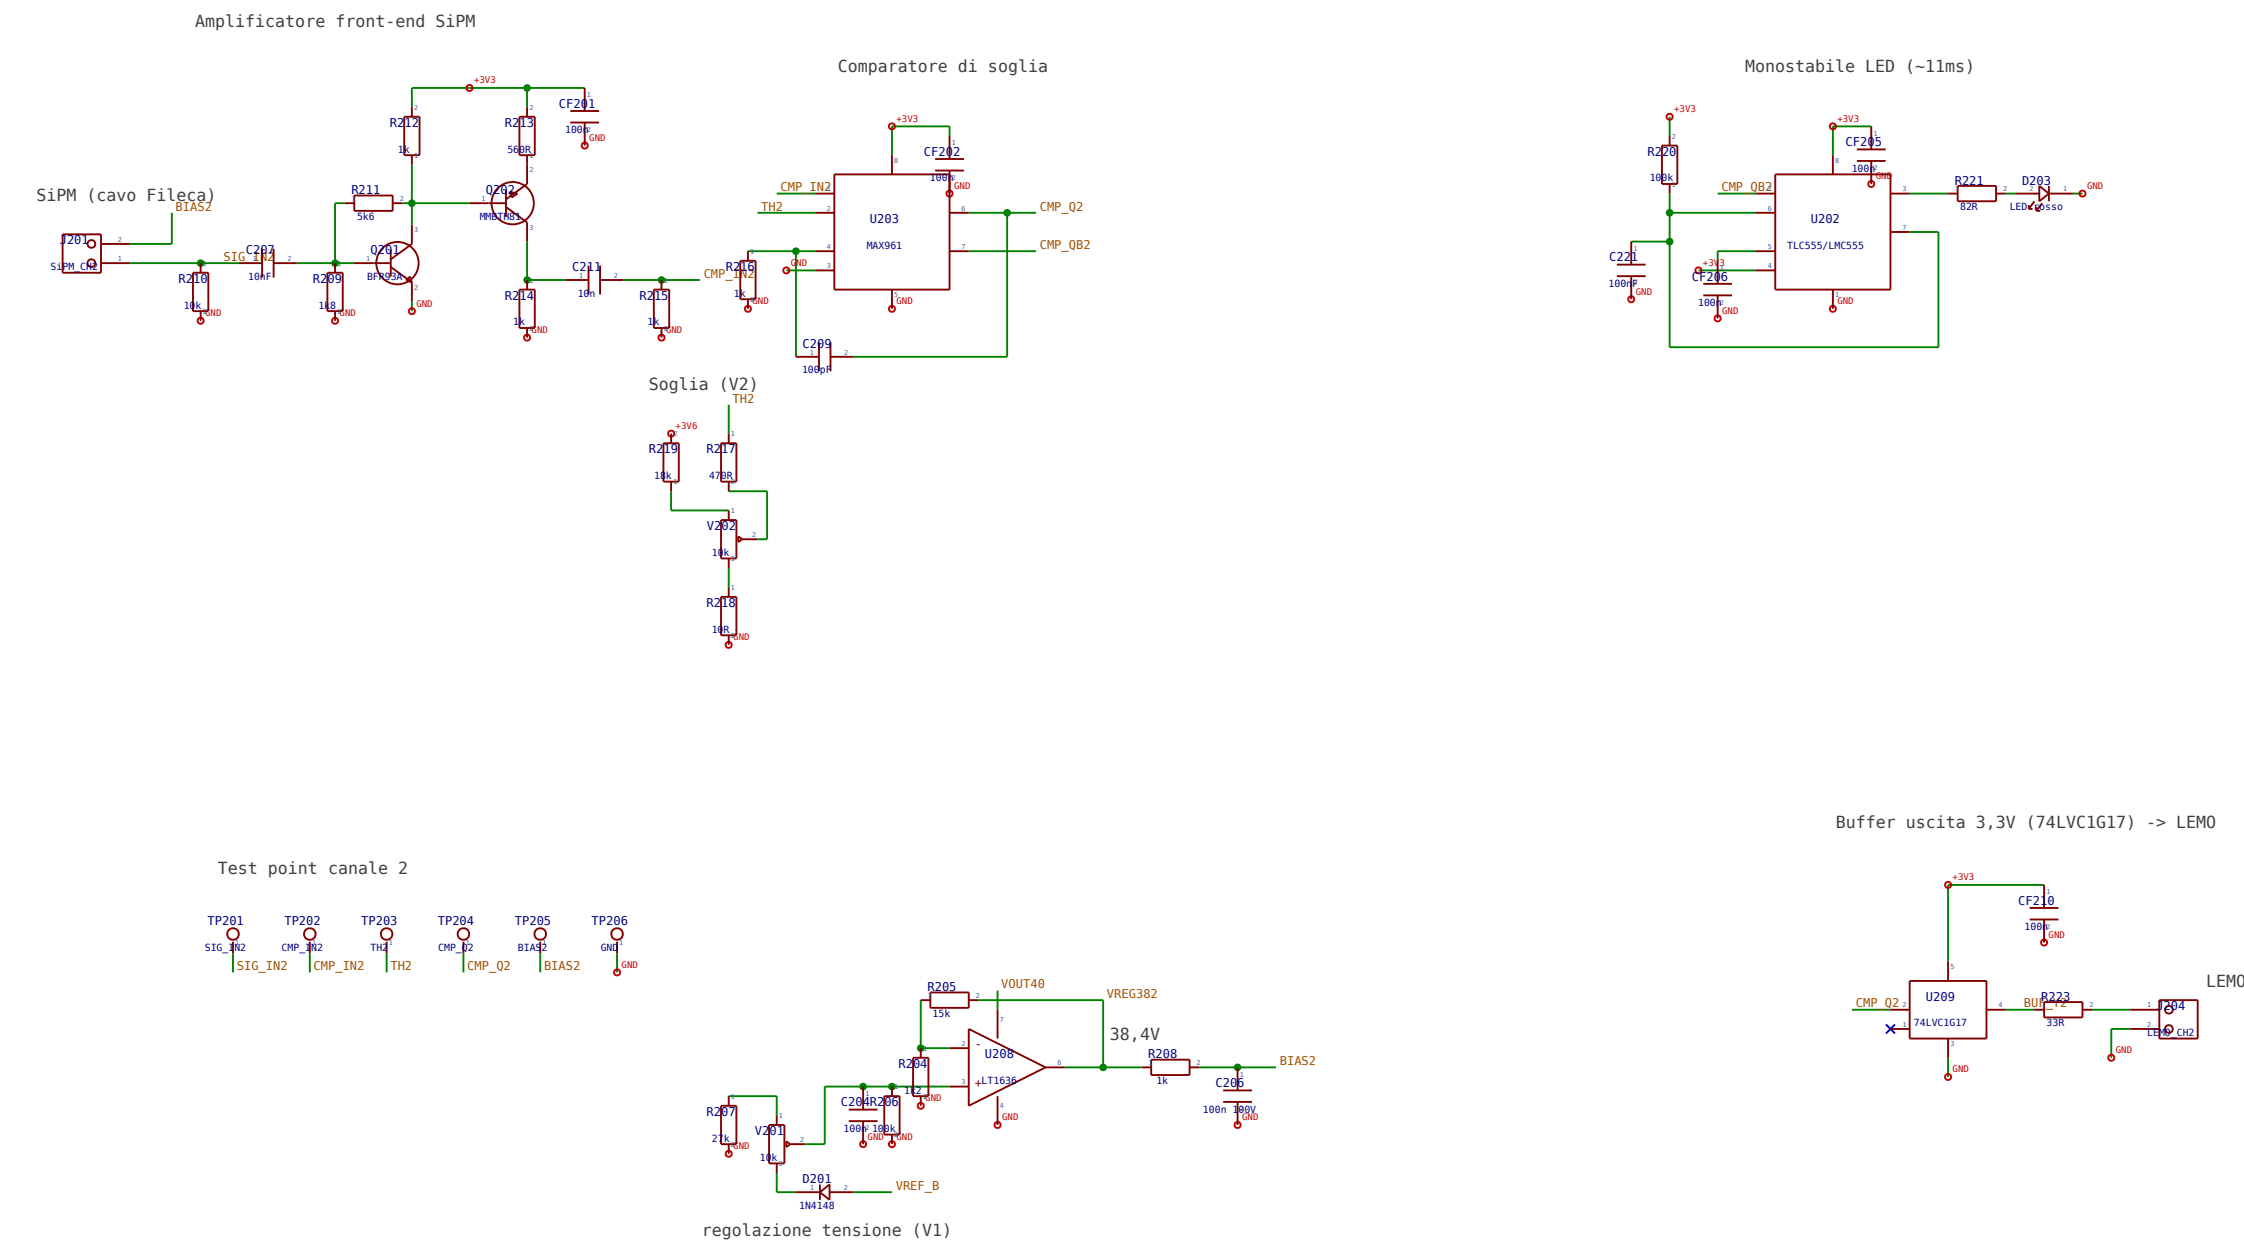

Foglio 1/1

Formato A3

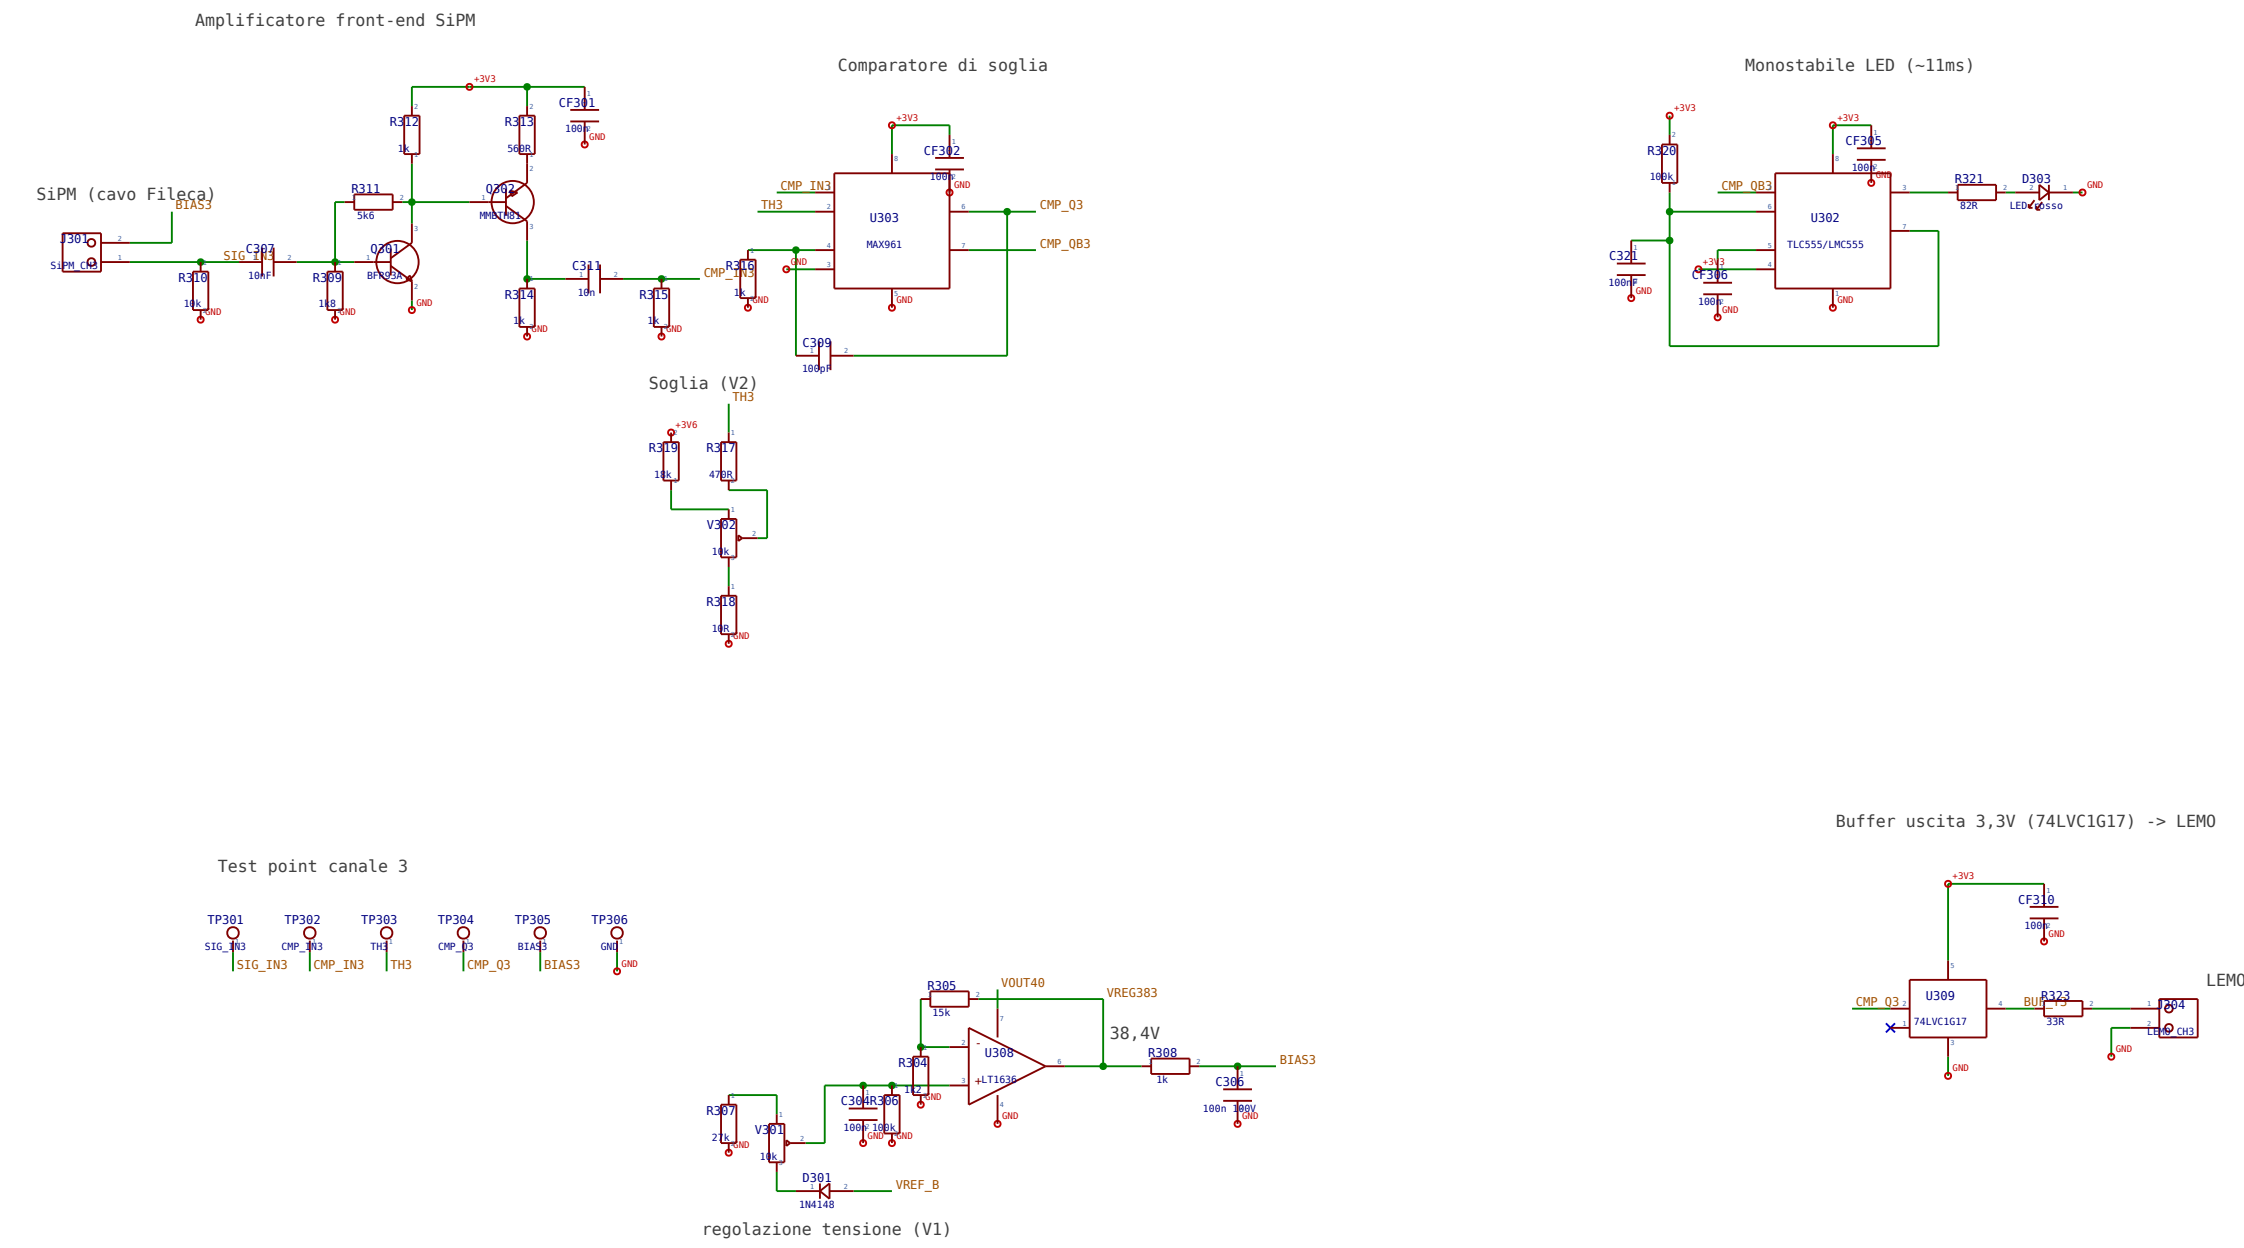

CANALE 1

CANALE 2

CANALE 3

Riv. Cosmici 2024 - 3 canali + coincidenza

3 front-end SiPM, boost/bias in comune, AND 74LVC1G11 con esclusione, uscite LEMO 00

Progetto originale: INFN sez. Torino, S. Gallian (rev. A, 2024)
Licenza CERN-OHL-W-2.0 - github.com/bagnasconicolglacier-elettronica

Rev. B1 Data 2026-10-10

Foglio 1/1

Formato A1
